

InnovCare aims at combining ICT eHealth solutions, services and products by adapting and integrating different innovative commercial solutions, mostly based on Ambient Assisted Living technologies.

- Physical
- Cognitive
- Neurological
- Emotional
- Perceptual

FUNCTIONAL DECLINE

EARLY DETECTION

INTEGRATED SUPPORT

Status of the Project:

Currently InnovCare is being tested in three different countries (Israel, Netherlands and Norway) by 50 older adults and its corresponding caregivers.

- Older adults
- Informal Caregivers
- Formal Caregivers

- The InnovCare concept will aim to provide a novel support system with personalized assisted living ICT services for older adults in order to prolong their autonomy, improve their physical, mental and emotional wellbeing, prevent further dependence, and facilitate networks to support self-care.
- A middleware component focuses on the proper processing, classification and storage of data by applying the linked data approach to the value chain of information handling.
- Monitoring data is collected from the older adult with the help of a wearable care watch, apps on an Android device, and in-home sensors.

Platform

A personalized and dynamic InnovCare watch with a combination of input and a supportive conversational interface, to guide older adults through the use of external add-ons (mememtum app, tele monitoring devices, etc.) that require user interaction.

Watch

A personalized and dynamic InnovCare watch with a combination of input and a supportive conversational interface, to guide older adults through the use of external add-ons (mememtum app, tele monitoring devices, etc.) that require user interaction.

BOT

A personalized and dynamic InnovCare watch with a combination of input and a supportive conversational interface, to guide older adults through the use of external add-ons (mememtum app, tele monitoring devices, etc.) that require user interaction.

Project Consortium

The project INNOVCARE is co-funded by the AAL Joint Programme (Ref. AAL-2014-1-192) and the National Authorities for AAL Programs in Spain (Ministerio de Energía, Turismo y Agenda Digital - Ref: AAL-2016-2018) and in the Netherlands and Norway.
